Annual	1.75%	2.25%	1.00%
Min. Investment	€2,500	€2,500	€100,000

All information expressed in Euro

¹ Since Inception

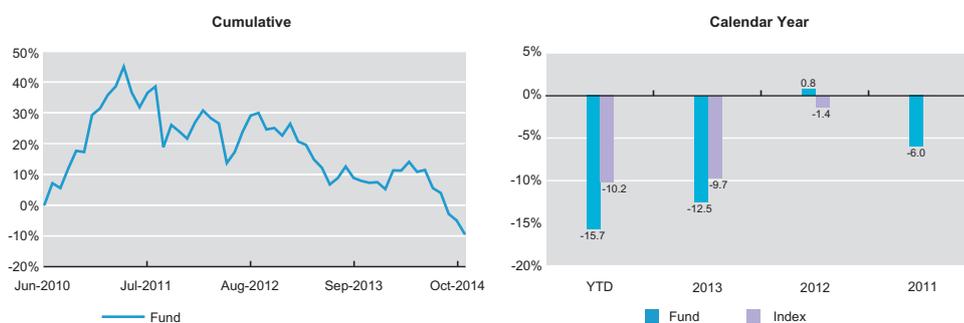

Fund Objective and Policy

The aim of the Fund is to grow the amount you invested.

The Fund invests in commodities using derivatives. Commodities are physical materials such as oil, agricultural products and metals. Derivatives are sophisticated investment instruments linked to the rise and fall of the price of other assets.

The Fund may also make use of short selling techniques (which are designed to make a profit from falling prices) and leverage (a technique which magnifies the potential gains or losses from the Fund's investments).

Performance Since Inception

Fund Performance - Cumulative

	1M%	3M%	YTD%	1Y%	3Y%	5Y%	SI% ¹
Fund (Net)	-4.6	-12.8	-15.7	-15.6	-27.0	-	-9.5
Index (Gross)	-4.1	-10.8	-10.2	-9.1	-23.1	-	-

Performance 12 Months Ending

	30th Nov 10	30th Nov 11	30th Nov 12	30th Nov 13	30th Nov 14
Fund (Net)	-	5.7%	0.9%	-14.3%	-15.6%

Note: All performance figures relate to the Net Acc Class A (Retail) EUR Hedged share class.

Past performance is not a guide to future performance.

The value of investments and any income is not guaranteed and can go down as well as up and may be affected by exchange rate fluctuations. This means that an investor may not get back the amount invested.

Data reflects current management and other charges, but does not consider the effect of initial charges applicable to new investments.

Comparative hedged index started in March 2011.

The mention of any specific shares or bonds should not be taken as a recommendation to deal.

Hedged Share Class specific information

Hedged Share Classes aim to reduce exposure to exchange rate movements in the Reference Currency of the fund by hedging from this currency into the Hedged Currency. However, there can be no guarantee that the hedging strategy applied in hedged share classes will entirely eliminate the adverse effects of changes in exchange rates between the Reference Currency and the Hedged Currency.

Please refer to further Risk Warnings and Glossary at the rear of this document.

Risk Warnings

MARKET RISK: The value of investments can fall as well as rise and investors might not get back the sum originally invested, especially if investments are not held for the long term.

CURRENCY RISK: Where investments are made in assets that are denominated in foreign currency, changes in exchange rates may affect the value of the investments.

POLITICAL AND FINANCIAL RISK: The fund invests in markets where economic and political risk can be significant and where governance and regulation may not be well developed. These factors can affect liquidity, settlement and asset values.

LIQUIDITY RISK: The fund invests in assets that are not always readily saleable without suffering a discount to fair value. The portfolio may have to lower the selling price, sell other investments or forego another, more appealing investment opportunity.

VOLATILITY RISK: The fund may exhibit significant price volatility.

BASIS RISK: The fund invests in commodity derivatives rather than physical commodities. Therefore, changes in the prices of the underlying commodities will not be mirrored exactly in the fund price.

Summarised Glossary

In addition to the above specific risk warnings applicable to the fund, the second page of the factsheet includes a number of statistical measures that should also assist investors and/or their advisors in selecting funds that meets both their investment objectives and appetite for risk.

SHARPE RATIO: This measure is a risk-adjusted return statistic. It measures the fund's return over and above cash (excess return over a risk free asset) divided by the absolute volatility of the fund. It shows the trade-off between risk and return. The greater the result, the better the return the fund has delivered given the risks within the fund.

ABSOLUTE VOLATILITY: One of the main ways in which the risk of an investment is measured is calculating the degree to which its value fluctuates around an average. The standard method for calculating this volatility is standard deviation. Absolute volatility is the standard deviation of the fund's last three years' performance which is then expressed as a percentage. All the other risk measures below are also based on the last 3 year's fund performance.

AVERAGE LIFE: This is the weight adjusted average life of the bonds held in the portfolio i.e. on average how many years to go before their expected redemption.

BETA: This is a measure of the volatility of the fund relative to its benchmark. A figure greater than 1 indicates that the fund will tend to outperform in a rising market and under perform in a falling one. I.e. is more volatile than the market. The reverse applies to a Beta of less than 1.

INFORMATION RATIO: This statistic is commonly used to measure a fund manager's skill against the benchmark. The out/underperformance of the fund relative to its peer group is divided by the tracking error. Therefore, anything positive is above average and anything negative is below average. The larger the number the better.

JENSEN ALPHA: A risk-adjusted performance measure that represents the average return on the fund over and above that predicted by the CAPM (Capital Asset Pricing Model), given the fund's beta and the average market return as represented by the benchmark. If the value is positive then the fund has outperformed the market and if it is negative then the opposite is true.

MODIFIED DURATION: Is a measure of risk for fixed interest securities as it predicts the sensitivity of the value of the fund's portfolio to a change in interest rates. The higher the value the greater the volatility of the fund's performance resulting from changes to interest rates. If the modified duration of a fund is 5 years then the average price movement of the fund resulting from a +/- 1% change in interest rates is 5%.

R²: This is a measure of how close the portfolio of a fund is correlated (or can be explained by) the performance of the benchmark. A result of 1 means a perfect correlation whilst 0 means there is effectively no relationship between the two performances. The degree of reliance that can be placed on the result is not linear, however. Generally, a correlation is only significant for values of 0.75 and above. Finally, it is worth noting that the higher the R² the greater the reliance that can be placed on the beta result.

RELATIVE VOLATILITY: Shows how much more or less volatile the fund has been relative to its benchmark which for all risk measures will be an index. For example if the fund's absolute volatility is 9% and the benchmark's is 10% then the relative volatility is 0.90.

TRACKING ERROR: Indicates how closely the fund tracks the benchmark. It is the standard deviation of the monthly returns of the fund divided by the monthly returns of its benchmark. The lower the number the closer the fund follows its benchmark.
