Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Responsible Global Emerging Markets Equity

Legal entity identifier: 213800BICB11V5TYV922

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

What environmental and/or social characteristics are promoted by this financial product?

The overarching philosophy of the Portfolio is to:

- Avoid companies with environmentally or socially damaging products, or unsustainable business or governance practices
- Invest in companies that make a positive contribution to society and the environment
- Improve management of ESG issues, using our influence as an investor to encourage best practice through engagement and voting

The Investment Manager adheres to this philosophy through a variety of means, including:

 Avoid: The Responsible Investment Team screens every company considered for inclusion in the Portfolio against exclusion criteria. The application of these productbased and conduct-based criteria, which the Investment Manager reviews regularly, results in the avoidance of companies with environmentally or socially damaging products, or unsustainable business or governance practices, and companies which breach global norms, including the UN Global Compact.

- **Invest**: The Portfolio seeks investment opportunities across key sustainability themes which have an environmental or social focus addressing the following:
 - 1. Health and well-being Supporting the provision of services to improve personal long-term well-being, e.g. education, health and sanitation
 - 2. Food and nutrition Helping advance sustainable production and consumption patterns
 - 3. Technological innovation Delivering technological and connectivity solutions to advance sustainable development
 - 4. Energy transition Fuelling the economy with efficient and affordable energy from both conventional and alternative sources
 - 5. Sustainable infrastructure Helping build resilient infrastructure in transport, energy, water, communications and other sectors
 - 6. Responsible finance Providing financial services to advance financial inclusion, small and medium-sized enterprise (SME) development, green finance and sustainable financial markets

Companies' revenue alignment with these six themes is assessed pre-investment, and the Investment Manager assesses the Portfolio's overall alignment with each theme. In addition, the Investment Manager analyses how individual companies' key sources of revenue map to the targets which underpin the Sustainable Development Goals (SDGs), which the Investment Manager can link to environmental and social outcomes.

The Portfolio will hold a minimum proportion (67.5%) of sustainable investments in companies that provide sustainability solutions or that otherwise make a positive contribution to society or the environment.

 Improve: Our objective-orientated engagement encourages companies to improve their management of material environmental, social and governance (ESG) issues, which should translate into companies – over the longer term – contributing more positively to the environment and society.

The Portfolio has not designated a benchmark for the purpose of attaining the environmental or social characteristics promoted, as the Investment Manager considers that sustainability indicators are a more appropriate measure of the environmental and social characteristics promoted. It is an actively managed Portfolio with the MSCI Emerging Markets NR Index used for a comparator benchmark and the Portfolio has significant freedom to invest in a portfolio that is materially different to the benchmark's own composition.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Investment Manager uses the following indicators to measure the attainment of the environmental and social characteristics promoted by the Portfolio:

- The number of companies determined to be in breach of the Portfolio's exclusion criteria and/or global norms.
- The percentage of the Portfolio which aligns to its key sustainability themes
- Held companies' revenue alignment with the targets which underpin the Sustainable Development Goals (SDGs)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The number of environmental- and social-linked engagement objectives and/or milestones achieved
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

As a result of the Portfolio's sustainability philosophy, the Portfolio will invest in a proportion of sustainable investments.

These investments may contribute to a sustainable objective through their alignment with the Sustainable Development Goals (SDGs) and key sustainability themes, most notably:

- 1. Health and well-being Supporting the provision of services to improve personal long-term well-being, e.g. education, health and sanitation
- 2. Food and nutrition Helping advance sustainable production and consumption patterns
- 3. Technological innovation Delivering technological and connectivity solutions to advance sustainable development
- 4. Energy transition Fuelling the economy with efficient and affordable energy from both conventional and alternative sources
- 5. Sustainable infrastructure Helping build resilient infrastructure in transport, energy, water, communications and other sectors
- 6. Responsible finance Providing financial services to advance financial inclusion, small and medium-sized enterprise (SME) development, green finance and sustainable financial markets
- How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The Portfolio's investment philosophy, as explained in more detail in the "investment strategy" below ensures that the sustainable investments made by the Portfolio do not significantly harm sustainable investment objectives.

The Portfolio screens out investments that are contrary to the goals of making positive contributions to the environment and/or society. These exclusions are detailed under the "avoid" section of the investment process and additional information is available in the Article 10 SFDR disclosures at www.columbiathreadneedle.com by selecting the Portfolio and accessing the Literature section. These criteria are product- and conduct-based, covering topics such as tobacco and weapons, and United Nations Global Compact breaches.

Through the Portfolio's investment research, Sustainability Risks are considered throughout the investment cycle which serves to mitigate the risks of significant harm. Furthermore, companies are identified which the Investment Manager thinks could benefit from active engagement to address material ESG issues.

The Investment Manager monitors portfolio holdings every quarter, and any position held by the Portfolio that no longer qualifies must be sold within the following six months taking due consideration of the best interests of the shareholders.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an inhouse data driven model and investment team due diligence.

The model identifies harm by using a quantitative threshold against a selection of principal adverse impact indicators. Issuers which fall below these thresholds are flagged as potentially harmful. This is then considered taking account of the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, investment teams endeavour to satisfy that no significant harm has taken place through desk-based research or issuer engagement.

In addition, all holdings must comply with a set of environmental and social exclusions which seek to avoid harming Sustainability Factors as detailed below.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excludes companies which breach UN Global Compact (UNGC) principles and further considers good conduct when making investments. In addition, the DNSH checks also assess issuers for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

The Portfolio proactively considers the principal adverse impact ("PAIs") of investment decisions that may negatively harm Sustainability Factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to sustainability indicators that cannot be held by the Portfolio. The exclusions

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

applied by the Portfolio relate to fossil fuel exposure, non-renewable energy production, biodiversity, hazardous and radioactive waste, global norms, controversial weapons, deforestation and incidents of discrimination. In addition, it considers PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination.

More information on how the Portfolio considers the PAIs of its investment decisions on Sustainability Factors will be made available in the Fund's annual reports available at the registered office of the Fund.

The investment strategy

guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The Portfolio is an actively managed equities Portfolio and for non-ESG/sustainable strategy information, please see the Investment Objectives and Policy in Appendix I.

To ensure that the environmental and/or social characteristics promoted by the Portfolio are attained, the investment strategy embeds an "Avoid, Invest, Improve" philosophy in the investment policy:

Avoid –

- The Investment Manager has a set of exclusion criteria setting standards to avoid investment in companies with socially or environmentally damaging products or unsustainable business or governance practices.
- For inclusion in the investable universe, stocks are submitted by the Investment Team to the Responsible Investment Team which screens companies against product- and conduct-based criteria using data providers and primary research. An external advisory council – the Responsible Investment Advisory Council – provides advice on the development of these criteria and reviews screening decisions.
- The product- and conduct-based criteria include exclusions on among other issues – tobacco, alcohol, weapons, gambling, nuclear energy, pornography and United Nations Global Compact (UNGC) breaches. In addition, companies are expected to meet high standards in how they operate and manage ESG risks
- These product- and conduct-based criteria apply to all Portfolio assets other than ancillary assets, unless otherwise stated.

Invest –

The Investment Manager invests in companies providing sustainability solutions and/or companies making a positive contribution to society and/or the environment. Within this element, the Investment Manager looks to key sustainability themes, most notably: health and well-being, food and nutrition, technological innovation, energy transition, sustainable infrastructure and responsible finance.

Improve –

- The Investment Manager engages with the companies that the Portfolio invests in on significant ESG issues with most business relevance.
- As part of active ownership, the Investment Manager has the responsibility to take key ESG issues into account before, during and after investment decisions made in the Portfolio. The purpose of engagement is to mitigate risk, to underpin

long-term returns, and to contribute to a more sustainable world by encouraging better management of sustainability issues by our investee companies. The global engagement programme of the Investment Manager is structured around the following core themes:

- Environmental Stewardship
- o Climate Change
- o Human Rights
- Labour Standards
- Public Health
- Business Ethics
- Corporate Governance
- An independent Responsible Investment Advisory Council (RIAC) works with the Responsible Investment and Investment Teams to provide input on key ESG trends and engagement priorities.

In addition, the Investment Manager believes that an appropriate comparator benchmark for reviewing Portfolio performance is the MSCI Emerging Markets NR Index, given the investment policy of the Portfolio and the approach taken by the Investment Manager. The Portfolio is not constrained by this benchmark and has significant freedom to invest in a portfolio that is materially different to the benchmark's own composition.

The Investment Manager will apply the non-financial criteria described above to at least 90% of the total net assets of the Portfolio.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The following elements of the investment strategy are binding on the Portfolio:

- (1) The Portfolio complies with exclusion criteria, which are both product- and conduct-based, to avoid companies with environmentally or socially damaging products, or unsustainable business or governance practices.
- (2) The Portfolio avoids investment in companies which are determined to be in breach of global norms, including the UN Global Compact and the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- (3) The Portfolio invests in companies making a positive contribution to society and/or the environment which are aligned with sustainability themes with an environmental or social focus: alignment is assessed through mapping companies' revenue segments or through their enterprise impact that contributes to the Sustainable Development Goals' (SDG) underlying targets.

The Portfolio complies with the Paris-aligned Benchmark exclusions contained in Article 12 (1) (a)-(g) of Article 12(1)(a)-(g) of Commission Delegated Regulation (EU) 2020/1818). The restrictions referred to in point (1) and (2) above are applied regardless of the severity of any controversies which an investee company is/has been involved in. For further information, please refer to the Responsible Investment Strategies available on www.columbiathreadneedle.lu by selecting the Portfolio and accessing the ESG information section.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

There is no committed minimum rate of reduction in the scope of the investments considered.

What is the policy to assess good governance practices of the investee companies?

All companies in which investments are made are subject to a pre-investment good governance assessment and ongoing post-investment review of governance practices. The Investment Manager uses third-party data to assess a company's governance practices and supplements this with its fundamental research.

Pre-investment: The Investment Manager assesses all companies before investment. It may engage with a company to better understand or to encourage improvements relating to any flagged issues. If, however, it is concluded from the assessment that the company demonstrates poor governance practices, the Investment Manager will not invest in its securities.

Post-investment: Investee companies are monitored on an ongoing basis to confirm that there has been no material diminution in governance practices. The Investment Manager may engage with a company to better understand any flagged issues as part of its review. Where it is considered that a company no longer demonstrates good governance practices, the securities will be divested from the Portfolio.

The Investment Manager employs stringent criteria to determine the eligibility of investee companies' good governance practices. It uses proprietary ESG scores to assess performance on corporate governance, corporate behaviour, and human capital development. Companies scoring in the lowest segment of ESG scores will not be invested in, unless mitigating factors exist. The Investment Manager also monitors holdings using governance risk flags, which identify governance failures or risks which should be addressed by further research, voting or engagement where relevant.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

The Portfolio invests directly and globally in a range of equities.

All assets in which the Portfolio invests are subject to the sustainability criteria, which may include assets where the Investment Manager believes it can make a difference through a positive contribution to the environment and society, under the "invest" and "improve" elements of the strategy.

As a result of the Portfolio's sustainability philosophy, the Portfolio will invest in sustainable investments. The Portfolio will hold a minimum proportion of 67.5% in sustainable investments. However, the expected proportion of sustainable investments is 75%.

The minimum proportion of investments held in the Portfolio used to promote the environmental or social characteristics is 90%. Nevertheless, the expected proportion of investments aligned with the environmental and social characteristics is 100%.

An investment is considered sustainable where the issuer has greater than 50% of its revenue net positively aligned to the Sustainable Development Goals (SDG), or an issuer contributing to a sustainable objective by embedding sustainability into the economic purpose of its business (e.g. growing the proportion of revenue aligned with sustainability objectives, or delivering its enterprise impact in a way which contributes to a sustainable outcome).

Investments which do not meet the criteria for sustainable investments are not included in the Portfolio's proportion of sustainable investments. To calculate the Portfolio's overall proportion of sustainable investments, each investment that meets the above criteria is included in the calculation of sustainable investments (without adjusting for example for the percentage of revenue that contributes to SDGs) held in the Portfolio. It being noted, however, that the percentage of revenue that is not linked to a contribution to SDGs will also need to meet the "do no significant harm test" in order to for the entire investment to be considered a sustainable investment. The entire position of these investments is included in the calculation and added together to determine the total proportion of sustainable investments within the Portfolio.

The Portfolio does not commit to any minimum Shares of socially sustainable investments and sustainable investments with an environmental objective.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1A Sustainable

#1Aligned with
E/S
Characteristics

#1B Other E/S
characteristics

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.
- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are not used for the purposes of attaining the environmental or social characteristics promoted by the Portfolio but ESG criteria are considered when assessing counterparties.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

None. The Portfolio does not set a minimum commitment to investments with an environmental objective not aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹?

Yes:

In fossil gas In nuclear energy

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

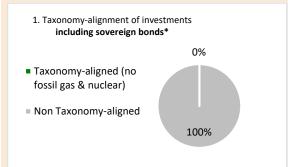

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

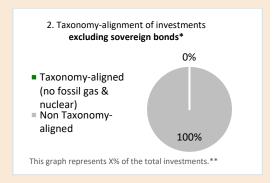

Enabling activities
directly enable other
activities to make a
substantial
contribution to an
environmental

objective.

Transitional activities
are activities for which
low-carbon alternatives
are not yet available and
among others have
greenhouse gas emission
levels corresponding to
the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.
 - What is the minimum share of investments in transitional and enabling activities?
 None.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

None. The Portfolio may invest in environmentally sustainable investments but has not set a minimum commitment. However, no minimum allocation to sustainable investments with either an environmental or social objective has been set, ensuring that the Portfolio can allocate capital to the very best investments available to achieve the sustainable investment objective for a proportion (minimum of 67.5% across both environmental and/or social sustainable investments) of the Portfolio's investments.

What is the minimum share of socially sustainable investments?

None. The Portfolio may invest in socially sustainable investments but has not set a minimum commitment. However, no minimum allocation to sustainable investments with either an environmental or social objective has been set, ensuring that the Portfolio can allocate capital to the very best investments available to achieve the sustainable investment objective for a proportion (minimum of 67.5% across both environmental and/or social sustainable investments) of the Portfolio's investments.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

This category includes ancillary liquid assets, money market instruments, money market funds and eligible deposits as well as hedging assets used for treasury management, defensive or hedging purposes. Derivatives are permitted within the Portfolio in order to assist with efficient management of overall asset class positions such as mitigating interest rate fluctuations, hedging against price falls in equity markets, or managing currency exposure.

Derivatives are not used for the purposes of attaining the environmental or social characteristics promoted by the Portfolio but ESG criteria are considered when assessing counterparties.

Currency exposure may arise from unhedged equity positions or a currency strategy and are limited to developed markets or major emerging markets. No ESG screens are applied to currencies.

Reference benchmarks

are indexes to measure whether the financial

characteristics that they

product attains the environmental or social

promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The Portfolio has not designated a benchmark for the purpose of attaining the environmental or social characteristics promoted. As such, the benchmark should only be used by investors as a comparison against the Portfolio's financial performance.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable.

- How does the designated index differ from a relevant broad market index?
 Not applicable.
- Where can the methodology used for the calculation of the designated index be found?
 Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

https://www.columbiathreadneedle.lu/en/intm/fund-details/ct-lux-responsible-global-emerging-markets-equity-r-acc-chf sf23 lu2060697674/
