## Investment Objective & Policy

The Fund aims to provide income with the prospect of some investment growth over the long term (5 years, or more). It also looks to outperform the iBoxx GBP Corporates 1-5 Index (the "Index") over rolling 3-year periods, after the deduction of charges.

The Fund is actively managed, and invests at least two-thirds of its assets in investment grade corporate bonds that will mature in 5 years or less.

The Fund may also invest in other bonds (including below investment grade corporate bonds, and government bonds) when considered appropriate to achieve its investment objective.

The bonds selected are denominated in sterling (or hedged back to sterling if a different currency) and issued by companies anywhere in the world.

The Index is broadly representative of the bonds in which the Fund invests and provides a suitable target benchmark against which Fund performance will be measured and evaluated over time.

The Investment Manager also seeks to create a portfolio that compares favourably against the Index over rolling 12-month periods, when assessed using the Columbia Threadneedle ESG Materiality Rating model.

This model (developed and owned by Columbia Threadneedle Investments) analyses company data to assess how effectively material environmental, social and governance (ESG) risks and opportunities are being managed.

Provided sufficient data is available, the results are combined and expressed as a numerical ESG Materiality rating to indicate how much exposure a company has to material ESG risks and opportunities in a particular industry.

Whilst the Fund may still invest in bonds issued by companies that have poor ESG Materiality ratings, at least 50% of the portfolio is invested in bonds issued by companies with strong ratings.

In line with its engagement policy, the Investment Manager engages with companies with a view to influencing management teams to address material ESG risks and improve their ESG practices ranging from climate change to board independence and diversity.

The Fund only invests in bonds issued by companies that follow good governance practices. It does not invest in bonds issued by companies which derive revenue from industries or activities above the thresholds shown: tobacco production (5%); nuclear weapons – indirect involvement (5%); conventional weapons – military, or civilian firearms (10%); and thermal coal – extraction or power generation (30%).

The Fund also excludes companies that have a direct involvement in nuclear weapons, controversial weapons, and companies that the Investment Manager determines to have breached international standards and principles.

The Fund is permitted to invest in other securities, as well as collective investment schemes (including funds managed by Columbia Threadneedle companies), and hold money market instruments, deposits, cash and near cash.

The Fund is not permitted to invest in derivatives for investment purposes, but derivatives may be used with the aim of reducing risk or managing the Fund more efficiently.

## Key Risks

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- Where investments are in assets that are denominated in multiple currencies, or currencies other than your own, changes in exchange rates may affect the value of the investments.
- The Fund invests in securities whose value would be significantly affected if the issuer refused, was unable to or was perceived to be unable to pay.
- The Fund holds assets which could prove difficult to sell. The Fund may have to lower the selling price, sell other investments or forego more appealing investment opportunities.
- Changes in interest rates are likely to affect the Fund's value. In general, as interest rates rise, the price of a fixed rate bond will fall, and vice versa.
- The Fund may invest in derivatives (complex instruments linked to the rise and fall of the value of other assets) with the aim of reducing risk or minimising the cost of transactions. Such derivative transactions may benefit or negatively affect the performance of the Fund. The Manager does not intend that such use of derivatives will affect the overall risk profile of the Fund.
- The Fund applies a range of measures as part of its consideration of ESG factors, including the exclusion of investments involved in certain industries and/or activities. This reduces the investable universe, and may impact the performance of the Fund positively or negatively relative to a benchmark or other funds without such restrictions.
- The fund may exhibit significant price volatility.
- The risks currently identified as applying to the Fund are set out in the "Risk Factors" section of the prospectus.

## Investment Approach

The fund invests predominately in sterling-denominated shorter-dated investment grade corporate bonds, predominantly up to five years in maturity. The fund may also invest in non-sterling bonds but all non-sterling exposure is hedged back to sterling.

Our well-established, team-based investment process addresses the seven main sources of performance for investment-grade corporate bonds. Primarily these are individual issuer and security selection, industry sector preference, credit rating and aggregate relative-spread risk. We also consider fund duration and yield-curve positioning. However, the majority of the active risk is expected to come from issuer and security selection.

Idea generation is delivered by expert teams with clearly defined processes for each source of opportunity. The process draws upon the considerable resources and experience of the global investment grade analyst team as well as our fixed income asset allocation and macro teams.

Performance

Past Performance does not predict future returns. The return of your investment may change as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation.

Source Morningstar UK Limited © 2025 as at 30/06/25. Net Fund returns - based on the bid-to-bid and assuming income is reinvested including ongoing charges excluding entry and exit charges.

Index returns include capital gains and assume reinvestment of any income. The index does not include fees or charges and you cannot invest directly in it.

Gross Fund returns - Source Columbia Threadneedle as at 30/06/25. Gross of fee portfolio returns are time-weighted rates of return net of commissions, transaction costs and non-reclaimable taxes on dividends, interest, and capital gains using pricing of investments which is either the last traded price or a bid basis. Cash flows are factored as of the end of the day and exclude entry and exit charges.

\*Please note that prior to 01/06/2023 the performance shown for the target benchmark is the iBoxx GBP Non-Gilts 1-5 Years Index.

MSCI ESG Rating & Score

The MSCI score assesses effectiveness at managing ESG exposure. If the fund score is above the index, the fund is overweight in issuers that manage their ESG exposures better than others. The MSCI ESG rating shows the assessment as a seven-point letter rating scale from AAA to CCC. These assessments are intended to be interpreted relative to a company's industry peers.

Columbia Threadneedle ESG Materiality Rating

We give companies an ESG materiality score using our ESG Materiality Rating model. This model, owned and developed by Columbia Threadneedle, builds on the Sustainability Accounting Standards Board (SASB) materiality framework and identifies the most financially material ESG risk and opportunity factors across a wide range of industries, based on subjective indicators. Where sufficient data is available, the output of the model is a rating from 1 to 5. The ratings indicate how much exposure a company has to material ESG risks and opportunities in a particular industry. A rating of 1 indicates that a company has minimal exposure to material ESG risks and a rating of 5 indicates that a company has a higher exposure to such risks. These ratings help us gain deeper insights into ESG issues and prioritise our engagement activity.

Tilt

The "Tilt" figure shows the bias of the fund relative to the index. It is expressed as the arithmetic difference in the weighting. A positive tilt indicates a bias towards a "better" RI profile than the index.

Sustainability Disclosure Requirements (SDR)

The Sustainability Disclosure Requirements (SDR) and labelling regime is a UK framework introduced by the Financial Conduct Authority (FCA) to improve transparency and consistency in how investment products and firms disclose sustainability-related information. It is part of the UK's broader efforts to combat greenwashing (misleading sustainability claims about a product or service) and promote the transition to a greener economy. The SDR regime includes a robust anti-greenwashing rule, sustainability investment labels (to help investors find products that have a specific sustainability goal), as well as comprehensive disclosure rules and naming and marketing rules for retail funds.

Net Zero Asset Managers Initiative (NZAMI)

International group of asset managers committed to supporting the goal of net zero greenhouse gas emissions by 2050 or sooner, in line with global efforts to limit warming to 1.5 degrees celsius; and to supporting investing aligned with net zero emissions by 2050 or sooner.

Carbon Footprint (tCO2e/US \$m invested)

Total carbon emissions for a portfolio normalized by the market value of the portfolio, expressed in tonnes of CO2e per US \$1m invested.

Weighted Average Carbon Intensity (tCO2e/US \$m revenue)

This measures carbon emissions relative to the size of issuers, measured by revenues. The metric used is tons of CO2e per US \$1m of revenues. We give data for the overall fund based on the weightings of the securities held and a comparison with similar data for the index.

Coverage

The fund and index's percentage of market value consisting of holdings for each applicable metric. Cash and derivatives, sovereign bonds, fund of funds, and asset-backed securities are excluded from coverage and all climate emissions calculations, unless otherwise stated in the case of sovereign bonds.

Scope 1 & 2 Emissions

The building blocks used to measure the carbon emissions and carbon intensity of a company. Under an international framework called the Greenhouse Gas Protocol these are divided into scope 1, 2 and 3 emissions. Scope 1 emissions are generated directly by the business (e.g. its facilities and vehicles). Scope 2 covers emissions caused by something a company uses (e.g. electricity). Scope 3 is the hardest to measure. It covers other indirect emissions generated by the products it produces (e.g. from people driving the cars a company makes).

Measures are being used to compare the ESG characteristics of the fund against the Index. This index also provides a helpful benchmark against which the financial performance can be compared. Accordingly, the index is not designed to specifically consider environmental or social characteristics. For more information on Responsible Investment (RI) or investment terms used in this document, please see the Glossary published in the Document Centre on our website: <https://www.columbiathreadneedle.co.uk/en/ret/about-us/responsible-investment/>. The decision to invest in the promoted fund should also take into account all the characteristics or objectives of the promoted fund as described in its prospectus. The fund's sustainability related disclosures can be found on our website [columbiathreadneedle.com](https://www.columbiathreadneedle.com). The ESG materiality scores are calculated on a trailing 12-month weighted average. For periods less than 12 months the rolling average will be calculated using the months available. Weighted average is computed using an equal weighting of the metric for each of the business days contained in the prior 12-month period. Cash and derivatives are excluded from coverage.

Share classes in the table may not be open to all investors, please refer to the Prospectus for further information. Overall impact of costs: Costs and expected returns may increase or decrease as a result of currency and exchange rate fluctuations, if costs are to be paid in another currency than your local currency. The ongoing charges figure (OCF), exit charges (maximum amount to be deducted shown in the table above) and transaction costs show the percentage that may be deducted from your expected returns. The OCF is usually based on the last year's expenses, includes charges such as the Fund's annual management charge and operating costs. Transaction costs displayed are based on a three year average total and are calculated based on FYE Report and Account figures. Where the fund is less than 3 years old the transaction costs are based on proxy and actual costs. All transaction costs are as at 30/04/24. Additional distributor or intermediary fees may not be included. In some cases, the OCF may be based on an estimate of future charges. For a more detailed breakdown please visit [www.columbiathreadneedle.com/fees](http://www.columbiathreadneedle.com/fees).
