Sustainability Label

This product has some sustainability characteristics, which are explained below. It does not pursue a sustainability objective and does not meet the criteria for a sustainable investment label. As such, this product does not have a UK sustainable investment label. Sustainable investment labels help investors find products that have a specific sustainability goal.

Key Facts

Fund Manager:

Benjamin Moore
Since Apr-19
Threadneedle Inv. Services Ltd.
Columbia Threadneedle Investment
Funds (UK) ICVC
Fund Inception Date: 31/10/86
Target Benchmark: FTSE World Europe ex UK
Comparator: IA Europe Excluding UK
Fund Currency: EUR
Fund Domicile: United Kingdom
EX-Dividend Date: Annual
Pay Date: Annual
Portfolio Size: £1,301.8m
No. of Securities: 42
Share Class Price: 4.8327
Historic Yield: 0.4%
Investment Style : The Fund currently exhibits a growth style bias relative to its benchmark. This means the majority of the fund invests in companies with above average growth rates, or good growth potential (based on indicators such as earnings and sales growth) relative to its benchmark. A fund's investment style may change over time.

Fund Objective & Policy

The Fund aims to achieve investment growth over the long term (5 years, or more). It also looks to outperform the FTSE World Europe ex UK Index ("the Index") over rolling 3-year periods, after the deduction of charges.
The Fund is actively managed, and invests at least 75% in a concentrated portfolio of shares of companies domiciled in Continental Europe, or which have significant Continental European business operations. There is no restriction on size, however, investment tends to focus on larger companies.
The Index represents the share performance of large and medium-sized companies across Europe (excluding the UK) and provides a suitable target benchmark against which Fund performance will be evaluated over time.
The Investment Manager selects companies in which it has a high conviction that the current share price does not reflect the prospects for that business, and typically invests in fewer than 50 companies, including some companies not within the Index.
The Investment Manager also seeks to create a portfolio that compares favourably against the Index over rolling 12-month periods, when assessed using the Columbia Threadneedle ESG Materiality Rating model.

This model (developed and owned by Columbia Threadneedle Investments) analyses company data to assess how effectively material environmental, social and governance (ESG) risks and opportunities are being managed. If sufficient data is available, the combined results are expressed as a numerical rating to indicate how much exposure a company has to material ESG risks and opportunities in a particular industry.

Whilst the Fund may still invest in companies that have poor ESG Materiality ratings, at least 50% of the portfolio is invested in companies with strong ratings.
The Investment Manager engages with companies with a view to influencing management teams to address material ESG risks and improve their ESG practices.
Columbia Threadneedle Investments is a signatory to the Net Zero Asset Managers Initiative and has committed to an ambition to reach net zero emissions by 2050 or sooner for a range of assets, including the Fund. As such, the Investment Manager will proactively engage with companies to assist with progressing this and may disinvest from those not meeting the minimum standards.
The Fund only invests in companies that follow good governance practices. It does not invest in companies which derive revenue from industries or activities above the thresholds shown: tobacco production (5%); nuclear weapons – indirect involvement (5%), conventional weapons – military, or civilian firearms (10%), and thermal coal – extraction or power generation (30%), providing a company is not engaged in new coal projects.
The Fund excludes companies that have direct involvement in nuclear or controversial weapons, and companies determined to have breached international standards and principles.
The Fund may invest in other securities, collective investment schemes (including funds managed by Columbia Threadneedle companies), money market instruments, deposits, and cash. Derivatives may only be held with the aim of reducing risk or managing the Fund more efficiently.

Risk & Reward Profile

UCITS SRRI

Key Risks

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- Where investments are in assets that are denominated in multiple currencies, or currencies other than your own, changes in exchange rates may affect the value of the investments.
- The Fund has a concentrated portfolio (holds a limited number of investments and/or has a restricted investment universe) and if one or more of these investments declines or is otherwise affected, it may have a pronounced effect on the Fund's value.
- The Fund may invest in derivatives (complex instruments linked to the rise and fall of the value of other assets) with the aim of reducing risk or minimising the cost of transactions. Such derivative transactions may benefit or negatively affect the performance of the Fund. The Manager does not intend that such use of derivatives will affect the overall risk profile of the Fund.
- An investment style bias can impact a Fund's performance relative to its benchmark in a positive or negative way. No investment style performs well in all market conditions. When one style is in favour another may be out of favour. Such conditions may persist for short or long periods. A Fund exhibits a growth style bias relative to its benchmark if the majority of the Fund invests in companies with above average growth rates, or good growth potential (based on indicators such as earnings and sales growth) relative to its benchmark. However, there is no guarantee that such companies will continue to show such characteristics in the future. A Fund's investment style may also change over time.
- The Fund applies a range of measures as part of its consideration of ESG factors, including the exclusion of investments involved in certain industries and/or activities. This reduces the investable universe, and may impact the performance of the Fund positively or negatively relative to a benchmark or other funds without such restrictions.
- The fund typically carries a risk of high volatility due to its portfolio composition or the portfolio management techniques used. This means that the fund's value is likely to fall and rise more frequently and this could be more pronounced than with other funds.
- The risks currently identified as applying to the Fund are set out in the "Risk Factors" section of the prospectus.

Typical Investor Profile

The Fund may be suitable for investors with an investment horizon of more than five years seeking capital growth who are prepared to tolerate large price fluctuations. If investors are uncertain if the Fund is suitable for them, they are advised to contact a financial adviser.

MSCI ESG Rating & Score

The MSCI score assesses effectiveness at managing ESG exposure. If the fund score is above the index, the fund is overweight in issuers that manage their ESG exposures better than others. The MSCI ESG rating shows the assessment as a seven-point letter rating scale from AAA to CCC. These assessments are intended to be interpreted relative to a company's industry peers.

Columbia Threadneedle ESG Materiality Rating

We give companies an ESG materiality score using our ESG Materiality Rating model. This model, owned and developed by Columbia Threadneedle, builds on the Sustainability Accounting Standards Board (SASB) materiality framework and identifies the most financially material ESG risk and opportunity factors across a wide range of industries, based on subjective indicators. Where sufficient data is available, the output of the model is a rating from 1 to 5. The ratings indicate how much exposure a company has to material ESG risks and opportunities in a particular industry. A rating of 1 indicates that a company has minimal exposure to material ESG risks and a rating of 5 indicates that a company has a higher exposure to such risks. These ratings help us gain deeper insights into ESG issues and prioritise our engagement activity.

Tilt

The "Tilt" figure shows the bias of the fund relative to the index. It is expressed as the arithmetic difference in the weighting. A positive tilt indicates a bias towards a "better" RI profile than the index.

Sustainability Disclosure Requirements (SDR)

The Sustainability Disclosure Requirements (SDR) and labelling regime is a UK framework introduced by the Financial Conduct Authority (FCA) to improve transparency and consistency in how investment products and firms disclose sustainability-related information. It is part of the UK's broader efforts to combat greenwashing (misleading sustainability claims about a product or service) and promote the transition to a greener economy. The SDR regime includes a robust anti-greenwashing rule, sustainability investment labels (to help investors find products that have a specific sustainability goal), as well as comprehensive disclosure rules and naming and marketing rules for retail funds.

Net Zero Asset Managers Initiative (NZAMI)

International group of asset managers committed to supporting the goal of net zero greenhouse gas emissions by 2050 or sooner, in line with global efforts to limit warming to 1.5 degrees celsius; and to supporting investing aligned with net zero emissions by 2050 or sooner.

Carbon Footprint (tCO2e/US \$m invested)

Total carbon emissions for a portfolio normalized by the market value of the portfolio, expressed in tonnes of CO2e per US \$1m invested.

Weighted Average Carbon Intensity (tCO2e/US \$m revenue)

This measures carbon emissions relative to the size of issuers, measured by revenues. The metric used is tons of CO2e per US \$1m of revenues. We give data for the overall fund based on the weightings of the securities held and a comparison with similar data for the index.

Coverage

The fund and index's percentage of market value consisting of holdings for each applicable metric. Cash and derivatives, sovereign bonds, fund of funds, and asset-backed securities are excluded from coverage and all climate emissions calculations, unless otherwise stated in the case of sovereign bonds.

Scope 1 & 2 Emissions

The building blocks used to measure the carbon emissions and carbon intensity of a company. Under an international framework called the Greenhouse Gas Protocol these are divided into scope 1, 2 and 3 emissions. Scope 1 emissions are generated directly by the business (e.g. its facilities and vehicles). Scope 2 covers emissions caused by something a company uses (e.g. electricity). Scope 3 is the hardest to measure. It covers other indirect emissions generated by the products it produces (e.g. from people driving the cars a company makes).

Measures are being used to compare the ESG characteristics of the fund against the Index. This index also provides a helpful benchmark against which the financial performance can be compared. Accordingly, the index is not designed to specifically consider environmental or social characteristics. For more information on Responsible Investment (RI) or investment terms used in this document, please see the Glossary published in the Document Centre on our website: <https://www.columbiathreadneedle.co.uk/en/retl/about-us/responsible-investment/>. The decision to invest in the promoted fund should also take into account all the characteristics or objectives of the promoted fund as described in its prospectus. The fund's sustainability related disclosures can be found on our website [columbiathreadneedle.com](https://www.columbiathreadneedle.com). The ESG materiality scores are calculated on a trailing 12-month weighted average. For periods less than 12 months the rolling average will be calculated using the months available. Weighted average is computed using an equal weighting of the metric for each of the business days contained in the prior 12-month period. Cash and derivatives are excluded from coverage.

Share classes in the table may not be open to all investors, please refer to the Prospectus for further information. Overall impact of costs: Costs and expected returns may increase or decrease as a result of currency and exchange rate fluctuations, if costs are to be paid in another currency than your local currency. The ongoing charges figure (OCF), exit charges (maximum amount to be deducted shown in the table above) and transaction costs show the percentage that may be deducted from your expected returns. The OCF is usually based on the last year's expenses, includes charges such as the Fund's annual management charge and operating costs. Transaction costs displayed are based on a three year average total and are calculated based on FYE Report and Account figures. Where the fund is less than 3 years old the transaction costs are based on proxy and actual costs. All transaction costs are as at 07/03/25. Additional distributor or intermediary fees may not be included. In some cases, the OCF may be based on an estimate of future charges. For a more detailed breakdown please visit www.columbiathreadneedle.com/fees.
