CT (Lux) Responsible Global Emerging Markets Equity

April 2025

¹ First published September 2023

Summary

The Responsible Global Emerging Markets fund promotes environmental and social characteristics but does not have as its objective sustainable investment.

The fund promotes environmental and social characteristics by incorporating an "Avoid, Invest, Improve" philosophy in the investment policy. We apply a set of exclusion criteria to avoid investment in companies with socially or environmentally damaging products or services or unsustainable business or governance practices. We invest in companies providing sustainable products and services and/or companies making a positive contribution to society or the environment. We engage with companies on significant Environmental, Social and Governance (ESG) issues most relevant to their business to reduce risk, to support long-term returns, and to encourage better management of sustainability issues. An independent Responsible Investment Advisory Council (RIAC) provides ongoing oversight and advice.

Although the fund does not have a sustainable investment objective it will hold a minimum proportion of 67.5% in sustainable investments with an environmental objective and/or a social objective. However, these investments do not qualify as environmentally sustainable under the EU Taxonomy Regulation. We can demonstrate that the sustainable investments made by the fund do not significantly harm other sustainable investment objectives in three ways:

- 1. The fund excludes investments that are contrary to the goals of making positive contributions to the environment and/or society.
- 2. Sustainability risks and ESG factors are considered throughout the investment cycle, to reduce the risks of significant harm. Where there are companies with material ESG issues that we do not deem to be significantly harmful, we will engage with them to improve their ESG practices
- Investments which are reported as sustainable have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

We conduct pre and post-investment good governance assessments on all companies. We employ stringent criteria to determine the eligibility of investee companies' good governance practices. We use proprietary ESG scores to assess performance on corporate governance, corporate behaviour, and human capital development. Companies scoring in the lowest segment of ESG scores will not be invested in, unless mitigating factors exist. We also monitor holdings using governance risk flags, which identify governance failures or risks which should be addressed by further research, voting or engagement where relevant. Qualitative reviews assessing the good governance practices of a company will similarly take place where data is limited.

The fund is an actively managed emerging markets equities portfolio. All investments, with the exception of ancillary assets, are subject to the exclusion criteria and may include assets that demonstrate the potential for a positive contribution to the environment and/or society. The fund will hold a minimum proportion of 67.5% in sustainable investments. The minimum proportion of investments held in the fund used to promote environmental or social characteristics is 90%. Other investments include ancillary liquid assets, money market instruments and hedging assets. Derivatives are permitted within the fund in order to assist with managing interest rate fluctuations or currency exposure. They are not used for the purposes of attaining the environmental or social characteristics but ESG criteria are considered when assessing counterparties.

Monitoring of our funds is a crucial part of our investment activities. It is performed at several stages during the investment process, by the investment teams and by independent oversight groups to ensure that the investment managers are adhering to their philosophy and process and that every fund is managed within its stated investment objectives and adheres to any investment restrictions.

To ensure companies held in the Responsible Fund range continue to meet our criteria, the Responsible Investment team conducts ongoing monitoring of all held companies. Each quarter the

Responsible Investment team reviews: any changes in companies' exposure to certain products, e.g. tobacco; any involvement in recent controversies that might indicate poor ESG practices; and any merger and acquisition activity. Furthermore, held companies are monitored quarterly for new or ongoing UN Global Compact breaches. If a genuine breach is identified, the company/security in question is re-rated as "Unacceptable" for the Responsible Fund range and must be sold.

With regard to the Responsible Fund range, if a security is approved for investment by the Responsible Investment team, the Investment Mandate Control team is notified. Approved companies are coded into the portfolio order management system to prevent the Fund Managers/Investment Analysts from inadvertently investing in companies/securities which do not meet the Responsible Fund range's criteria. The Investment Mandate Control team ensures the fund invests only in companies which have been approved by the Responsible Investment team and conducts daily checks.

We use a combination of external and internal research and data to support the strategy. We have a data quality framework which includes validation checks, governance on models and change process with appropriate controls. The environmental and social characteristics are not limited by data limitations as we aim to supplement external data through the use of additional data providers and internal research and due diligence on a best endeavours basis. We assess data providers based on coverage, quality of their methodology, and data quality checks.

Engagement with companies is an important part of our ESG investment strategy. Our primary driver for engagement is to have constructive dialogue with companies to support long-term investment returns by mitigating risk, capitalising on opportunities linked to ESG factors, and reducing any material negative impact that our investment decisions could have on these factors. We believe that we can play a part in building a more sustainable and resilient global economy by encouraging companies to improve their ESG practices.

The fund does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the fund promotes.

No sustainable investment objective

The financial product promotes environmental and social characteristics, but does not have as its objective sustainable investment.

Although the fund does not have a sustainable investment objective it will hold a minimum proportion of 67.5% in sustainable investments with an environmental objective and/or a social objective. However, these investments do not qualify as environmentally sustainable under the EU Taxonomy Regulation.

We can demonstrate that the sustainable investments made by the fund do not significantly harm other sustainable investment objectives in three ways:

- The fund excludes investments that are contrary to the goals of making positive contributions to the environment and/or society. These criteria are product- and conductbased, covering topics such as tobacco and weapons, and United Nations Global Compact breaches.
- Sustainability risks and ESG factors are considered throughout the investment cycle, to reduce the risks of significant harm. Where there are companies with material ESG issues that we don't deem to be significantly harmful we will engage with them to improve their ESG practices.
- Investments which are reported as sustainable have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model determines harm by comparing metrics against adverse impact indicators (known as Principle Adverse Indicators). Companies which fall below a certain threshold are flagged as potentially harmful. We then consider the materiality of the harm, whether harm has or is occurring, and whether any remedial activities are underway to address the harm. Where data is not available we endeavour to satisfy that no significant harm has taken place through desk-based research or I company engagement.

We monitor the investments in the fund every quarter, and any investment that no longer qualify as a 'Sustainable Investment' will no longer be counted in the proportion of sustainable investments held in the fund.

Our approach also takes account of international standards and principles, as set out in OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, including:

- the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles;
- and Rights at Work and the International Bill of Human Rights.

We align to these guidelines through a combination of fund level exclusions and engagement with companies.

Environmental or social characteristics of the financial product

The fund promotes environmental and social characteristics by:

- Avoiding companies with environmentally or socially damaging products, or unsustainable business or governance practices - Our Responsible Investment team reviews every company considered for inclusion in the fund against exclusion criteria. As a result, companies with environmentally or socially damaging products, or unsustainable business or governance practices and companies which breach international standards and principles, including the UN Global Compact will be excluded.
- Investing in companies that make a positive contribution to society and the environment -We seek to invest in companies aligned to key sustainability themes including:
 - **Health and well-being** Supporting the provision of services to improve personal long-term well-being, for example education, health and sanitation
 - Food and nutrition Helping advance sustainable production and consumption patterns
 - **Technological innovation** Delivering technological and connectivity solutions to advance sustainable development
 - Energy transition Fuelling the economy with efficient and affordable energy from both conventional and alternative sources
 - Sustainable infrastructure Helping build resilient infrastructure in transport, energy, water, communications and other sectors
 - **Responsible finance** Providing financial services to advance financial inclusion, small and medium-sized enterprise (SME) development, green finance and sustainable financial markets
- Improving the management of ESG issues through engagement and voting activity We engage with companies to improve their management of material environmental, social and governance issues and enable them to contribute more positively to the environment and society.

We map the revenue of companies with these six themes and the targets which underpin the Sustainable Development Goals (SDGs), which can link to environmental and social outcomes.

Investment strategy

To ensure that the environmental and/or social characteristics promoted by the fund are achieved, we embed an "Avoid, Invest, Improve" philosophy in the investment policy:

Avoid

We apply a set of exclusion criteria to avoid investment in companies with socially or environmentally damaging products or services or unsustainable business or governance practices. The current exclusion criteria are as follows:

Product-based exclusions

We review whether companies are involved in providing activities and services that are deemed to be negative from an ethical or sustainability perspective.

Screening criteria

Issue	Criteria
Alcohol	Exclude companies that derive:
	 >0% of their revenue from the production of alcohol.
	 >33% of their revenue from selling alcohol (companies in the hotel, restaurant or leisure
	industries).
	 >10% of their revenue from bottling, wholesale or sale (other industries).
Deforestation	Exclude companies that derive:
	• > 100/ of their revenue from the production of poly oil or > 200/ of their revenue from
	sales/product ranges reliant on palm oil – and are not members of the Roundtable on Sustainable Palm Oil (RSPO).
	 >10% of their revenue from the production of soy and are not members of the Roundtable on Responsible Soy (RTRS)ⁱⁱ.
	 >10% of their revenue from the production of sugar and are not members of Bonsucroⁱⁱⁱ.
	 >10% of their revenue from timber-related activities and do not use FSC-/PEFC-certified timber^{iv}, v.
Fossil Fuels	
rossii rueis	Exclude companies with ownership of fossil fuel reserves.
	Coal - Exclude companies that derive:
	 >0% of their revenue from the mining of coal and its sale to external parties.
	• >1% of their revenue from coal distribution.
	• >1% of their revenue from coal refining.
	 >50% of their revenue from equipment and services for coal-related activities.
	Oil – Exclude companies that derive:
	 >0% of their revenue from the extraction and production of oil and natural gas liquids.
	 >5% of their revenue from the refining of oil fuels.
	 >5% of their revenue from the distribution of oil and related products.
	 >5% of their revenue from pipelines for oil and oil products or natural gas liquids.
	 >5% of their revenue from the transportation of oil and oil products.
	 >5% of their revenue from the retailing of oil and oil products^{vi}.
	 >50% of their revenue from equipment and services for oil-related activities^{vii}.
	Cas. Evalude companies that derive
	 Gas – Exclude companies that derive: >0% of their revenue from the extraction and production of natural gas.
	 >5% of their revenue from the extraction and production of riatural gas. >5% of their revenue from the processing of natural gas fuels.
	 >5% of their revenue from the distribution of gas and related products.
	 >5% of their revenue from natural gas pipelines.
	 >5% of their revenue from the transportation of natural gas.
	 >5% of their revenue from gas retail sales and liquefied petroleum gas (bottled gas) dealers.
	 >50% of their revenue from equipment and services for gas-related activities^{ix}.
	ND We appear companies to be actively decreasing their involvement in each fail free related
	NB. We expect companies to be actively decreasing their involvement in coal-/oil-/gas-related activities.
Electricity generation	Exclude companies that derive:
	 >10% of their revenue from thermal coal-based power generation^x.
	• Companies that derive >10%-50% of their revenue from liquid fuel- and/or natural gas-based power
	generation must have a Science Based Targets initiative (SBTi) target set at 1.5 degrees
	Celsius/well-below 2 degrees Celsius.
	 >50% of their revenue from liquid fuel- and/or natural gas-based power generation.
Fur	Exclude companies that:
	Produce fur.
	 Derive >1% of their revenue from the sale of fur products.
Gambling	Exclude companies that derive >10% of their revenue from gambling.
3	3 3
Nuclear energy	Exclude companies that:
	Derive >0% of their revenue from power production based on nuclear sources.
	 Derive >3% of their revenue from selling products or services to the nuclear power industry,
	except those that provide standard, non-customised or safety-related products/services.
	Own or operate active uranium mines.
	·

Pornography, harmful and violent materials	Exclude:
	• Companies involved in the production or distribution of pornographic, harmful or violent materials.
	 Retailers and telecom companies that derive >3% of their revenue from the sale of pornographic oviolent material.
Tobacco	Exclude companies that derive:
	 >0% of their revenue from the production of tobacco products.
	 >5% of their revenue from the manufacture of Next Generation products (including e-cigarettes) and their components.
	 >5% of their revenue from the distribution of tobacco products.
	 >10% of their revenue from the retail of tobacco products.
	 >10% of their revenue from the supply of products which are essential to the tobacco industry, e.g. machinery and packaging materials.
Weapons ^{xi}	Exclude companies that derive:
	 >0% of their revenue from the production or retail of weapons.
	 >0% of their revenue from the production of controversial and/or nuclear weapons components*.
	 >5% of their revenue from the production of other weapons components and/or goods and services which are customised for strategic military use.

Conduct Based Exclusions

In addition to the above criteria, the strategies will exclude companies that fail to address the key ethical, environmental and social impacts of their operations.

Screening criteria

Issue	Criteria
Human rights	 Exclude companies whose activities clearly infringe international agreements (such as the International Bill of Human Rights) and which are complicit in human rights abuses, either deliberately or through neglect.
	 Exclude companies that fail to cooperate in legitimate remediation.
	 Exclude companies that fail to respond to significant concerns of local communities, including indigenous communities, or that have very poor relations with them.
Labour standards	Exclude companies with repeated and significant violations or fines related to the below where there has been inadequate remedial action:
	Equal opportunities
	Diversity
	Health and safety
	Exclude companies with no evidence of response to repeated allegations of breaches of core ILO conventions on: child labour in their own operations; child labour in their supply chain; forced labour in their own operations; forced labour in their supply chain; and international labour standards.
Product safety	Exclude companies with repeated and significant violations related to product safety and failure to take adequate corrective action.
Responsible sales and marketing	Exclude companies with repeated or significant prosecutions related to mis-selling and/or mis-advertising products.
Governance	
Governance standards	Exclude companies that fail to meet standards of good governance in their countries of domicile covering issues such as board independence, shareholder rights, transparency and disclosure
Bribery and corruption	Exclude companies with repeated and significant violations related to bribery and corruption.

Compliance and ethics	Internal controls and a company's culture are key to managing conflicts of interest, preventing violations and managing business ethics.
	 Exclude companies with a fundamental regulatory breach or a pattern of significant/persistent breaches.
	 Exclude companies with a track record of unfair or inappropriate practices towards customers.
	 Exclude financial institutions where management has failed to take effective measures to respond to incidents of misconduct and/or unethical behaviour, or those where these are persistent.
	We expect companies to pay fair and appropriate taxes.
Environmental	
Climate change	Exclude companies in high impact sectors that do not have comprehensive climate change strategies that seek to measure and control their greenhouse gas emissions, as well as those in their supply chains, and demonstrate an understanding of the impact of climate change on their business strategy.
Biodiversity loss	Exclude companies if they are high impact and are not able to demonstrate an understanding of their negative impacts on biodiversity and an intention, such as an appropriate management system, to reduce this impact to acceptable levels.
Waste management	Exclude companies with a poor track record in complying with national regulations and international agreements regarding managing waste in the countries where they operate.
Water consumption	Exclude companies with a poor track record in complying with national regulations and international agreements regarding managing water consumption in the countries where they operate.

International codes and standards

We exclude companies with breaches of the UN Global Compact's (UNGC) Principles and/or the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. In assessing business conduct, we also refer to the International Labour Organization (ILO) Core Conventions, the UN Guiding Principles on Business and Human Rights and the Norges Bank excluded companies list.

The Fund complies with the Paris-aligned Benchmark exclusions contained in Article 12 (1) (a)-(g) of Article 12(1)(a)-(g) of Commission Delegated Regulation (EU) 2020/1818).

Invest

We invest in companies providing sustainable products and services and/or companies making a positive contribution to society or the environment. We focus on key sustainability themes including: health and well-being, food and nutrition, technological innovation, energy transition, sustainable infrastructure and responsible finance.

Improve

We engage with companies on significant ESG issues most relevant to their business. We engage to reduce risk, to support long-term returns, and to encourage better management of sustainability issues. Our engagement focuses on the following core themes:

- Environmental Stewardship
- Climate Change
- Human Rights
- Labour Standards
- Public Health
- Business Ethics

Corporate Governance

An independent Responsible Investment Advisory Council (RIAC) provides ongoing oversight and advice on the development of the exclusion criteria and screening decisions as well as input on key ESG trends and engagement priorities.

Good governance

We conduct a pre-investment good governance assessment and ongoing post-investment review of governance practices on all companies. We use third-party data to assess a company's governance practices and supplement this with our investment research.

Pre-investment: We assess all companies before investment. We may engage with a company to better understand or to encourage improvements relating to any flagged issues. If, however, we conclude that the issuer demonstrates poor governance practices, we won't invest.

Post-investment: Companies are monitored on an ongoing basis to confirm that there has been no material decline in governance practices. If any issues are flagged, we may engage with the company to better understand these. However, if the company no longer demonstrates good governance practices, the securities will be divested.

We employ stringent criteria to determine the eligibility of investee companies' good governance practices. We use proprietary ESG scores to assess performance on corporate governance, corporate behaviour, and human capital development. Companies scoring in the lowest segment of ESG scores will not be invested in, unless mitigating factors exist. We also monitor holdings using governance risk flags, which identify governance failures or risks which should be addressed by further research, voting or engagement where relevant. Qualitative reviews assessing the good governance practices of a company will similarly take place where data is limited.

Proportion of investments

The fund invests in global equities. All equity investments are subject to the sustainability criteria.

The fund will hold a minimum of 67.5% in sustainable investments. The minimum proportion of investments held in the fund used to promote environmental or social characteristics is 90%.

Other investments include ancillary liquid assets, money market instruments and hedging assets. Derivatives are permitted within the fund in order to assist with managing interest rate fluctuations, price falls in equity markets, and currency exposure.

Derivatives are not used for the purposes of attaining the environmental or social characteristics, but ESG criteria are considered when assessing counterparties.

Monitoring of environmental or social characteristics

Prior to investment each company is reviewed and approved by the Responsible Investment team and coded into the portfolio order management system.

The Investment Mandate Control team undertakes daily independent pre- and post-trade monitoring to ensure compliance with investment restrictions and house policies. Any breach is immediately

communicated to the relevant Fund Manager, Responsible Investment team, Client Director, and internal committees.

To ensure companies held in the fund continue to meet our criteria, the Responsible Investment team conducts ongoing monitoring.

Each quarter the Responsible Investment team reviews:

- any changes in companies' exposure to certain products, e.g. tobacco;
- any involvement in recent controversies that might indicate poor ESG practices;
- and any merger and acquisition activity;
- any new or ongoing UN Global Compact breaches. If a genuine breach is identified, the issuer will be re-rated as "Unacceptable" and must be sold.

The Compliance Monitoring Team also undertakes a quarterly control review of SFDR Article 8/9 funds. Trades are selected randomly. The relevant investment team's research and meeting notes are reviewed to ensure the relevant ESG characteristics have been considered.

To enable investment teams to continuously monitor the environmental and social characteristics of the fund, we produce daily fund exposure reports that detail exposure to exclusion criteria, conduct related controversy flags, alignment of the fund to the SDGs and flags related to principal adverse impacts. The investment team can also monitor engagement activity through our engagement tracking tool.

Investment teams also have access to range of ESG data sources, analytical tools, and our Responsible Investment team to support research if issues are identified through monitoring.

Methodologies

We use the following sustainability indicators to measure the attainment of the environmental and social characteristics promoted by the fund:

- The number of companies determined to be in breach of the fund's exclusion criteria and/or international standards and principles.
- The percentage of the fund which aligns to its key sustainability themes.
- Held companies' revenue alignment with the targets which underpin the Sustainable Development Goals (SDGs).
- The number of environmental- and social-linked engagement objectives and/or milestones achieved.

Data sources and processing

To identify the ESG characteristics of the fund we use external data sources and supplement this with our internal engagement research.

We typically construct ESG data into proprietary models including ESG ratings, SDG mappings, Net Zero alignment and Principle Adverse Impact models therefore our ESG inputs are typically derived rather than estimated data though estimated data may be utilised. We also source ESG ratings and research which is reliant on vendors' underlying methodology which may make use of estimated data or subjective analysis. This is further supplemented with internal investment research which may use various assumptions. Given the investment teams also have access to thousands of distinct ESG datapoints which they may or may not draw on, we are not able to define the proportion of estimated data which is used in the research process.

We have a data quality framework which includes validation checks, governance on models and change process with appropriate controls.

Data is processed through our operational framework. If the data is not available, we use our qualitative and quantitative assessment for decision making.

Limitations to methodologies and data

We use a combination of external and internal research and data to support the strategy.

We assess data providers based on coverage, quality of their methodology, and data quality checks. While data gaps and errors may occur, our main suppliers use a variety of means to address this such as:

- Validation quality assurance to validate data including qualitative data
- Checks for disclosure detection to improve coverage
- Checks for large variations or anomalies in data
- Data validation and constraints implemented on data input to ensure data consistency and completeness
- Validation for consistency on Unit of Measurements

The environmental and social characteristics are not affected by data limitations as we aim to supplement external data through use of additional data providers, internal research and due diligence on a best endeavours basis.

Due diligence

For inclusion in the investable universe, stocks are submitted to the Responsible Investment team, which screens companies against exclusions criteria using data providers and primary research. An external, independent advisory council – the Responsible Investment Advisory Council – provides advice on the development of these criteria and reviews screening decisions.

Where an investment is deemed a sustainable investment we will also assess it to ensure that:

- any corporate investment demonstrates good governance
- the investment contributes to a sustainable objective
- the investment does not significantly harm other sustainability objectives.

All holdings deemed eligible to be held in the fund are reviewed against the Principle Adverse Indicators that the fund has opted to consider for the purposes of engagement prioritisation.

Engagement policies

Engagement with companies is an important part of our investment approach. Active ownership enhances insights, drives change, and helps create future value. We believe that engagement on environmental, social, and governance issues will have a positive impact on corporate performance and investment returns, as well as on society or the environment.

Our Responsible Investment Engagement Policy outlines our approach to engagement across asset classes, themes covered, how we prioritise and potentially escalate engagement.

Our primary driver for engagement is to have constructive dialogue with companies to support longterm investment returns by reducing risk, capitalising on opportunities linked to ESG factors, and

reducing any material negative impact that our investment decisions could have on these factors. We believe that we can play a part in building a more sustainable and resilient global economy by encouraging companies to improve their ESG practices. This can also help drive positive impacts for the environment and society that are in line with the achievement of the United Nations Sustainable Development Goals (SDGs).

Our engagements focus on financial performance, sustainability risks and opportunities, operational excellence, capital allocation policies and managerial incentives, among other topics. Collaboration across asset classes, themes and sectors ensures an informed approach.

We will agree and set engagement objectives and timelines and use escalation strategies where appropriate, if companies do not demonstrate progress on matters that we believe are in our clients' best long-term interests. In considering engagement escalation strategies, we will make a case-by-case assessment of progress against our objectives and how issuers respond to our engagement. We have at our disposal several different options for escalation, which include; Collaborative engagement, Public statements, Filing shareholder resolutions, AGMs' Proxy Voting and partial or complete divestment.

Engagement will be executed by our Responsible Investment team, by the fund managers, or jointly. Engagements will be documented in an internal data base, and regular reporting to clients on engagement metrics will be made available.

Designated reference benchmark

The MSCI Emerging Markets NR Index is used as a comparator benchmark for financial performance, but the fund has significant freedom to invest in a portfolio that is materially different to the benchmark's own composition. The fund does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the fund promotes. As such, the benchmark should only be used by investors as a comparison against the fund's financial performance.

Important Information. Information is provided in reference to Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) and may be subject to change, following new or updated Regulatory guidance or other changes. Please refer to the current fund prospectus or Investment management agreement for further details and all risks applicable to investing. The information provided in this document may not be reproduced in any form or passed on to any third party without the express written permission of Columbia Threadneedle Investments. This material should not be considered as an offer, solicitation, advice or an investment recommendation. This communication is valid at the date of publication and may be subject to change without notice.

Columbia Threadneedle Investments is the global brand name of the Columbia and Threadneedle group of companies.

As members, if companies become involved in any significant environmental and/or social controversies then they need to take adequate corrective action. Same as above.

Same as above.

iv Same as above.

*Companies with thermal coal-based power generation must have a science based Targets influence (SBT)) ranget set at 1.3 degrees ceisios mon-bolow 2 degrees Ceisios.

*Conventional, unconventional and civilian weapons are in-scope.

*Our definition of controversial weapons encompasses the following types of weapons: biological; blinding lasers; chemical; cluster munitions; depleted uranium (incl. armour); incendiary; land mines; non-detectable fragments.

NB. The Fund may invest in Green Bonds issued by companies which do not meet the fossil fuels, electricity generation and nuclear energy criteria. Labelled bonds are screened by the Responsible Investment team in a separate process, which includes an assessment of the use of proceeds. The economic activities financed by labelled bonds must not be in breach of the Paris-aligned Benchmarks' exclusions.

Y Timber companies, homebuilding companies, and paper products companies are in-scope.

Y The Fund is permitted to hold companies that exceed the 5% revenue threshold if they have robust net zero transition plans which cover their product emissions, and/or are substantially benefitting customers in remote/rural areas.

Companies that derive >5% of their revenue from the production of hydraulic fracking technologies are excluded.

The Fund is permitted to hold companies that exceed the 5% revenue threshold if they have robust net zero transition plans which cover their product emissions, and/or are substantially benefitting customers in remote/rural areas; however, companies are excluded which derive >50% of their revenue from the distribution of gas and related products.

Same as above

^{*} Companies with thermal coal-based power generation must have a Science Based Targets initiative (SBTi) target set at 1.5 degrees Celsius/well-below 2 degrees
